

DUO USB SMART CHARGER WITH VEHICLE BATTERY VOLTAGE DISPLAY

NEW

Part
14225

Front View

- Early warning failure detection for batteries AND stator units.
- Digital voltage display also reads the output of vehicle battery.
- Automatically adjusts current to avoid overcharging devices.
- Duo USB Smart Charger has 2 state-of-the-art USB Ports with a combined 3.1 Amps (1 Amp and 2.1 Amps) designed to automatically control the flow of current. This not only protects against damage to the battery due to overcharging, but also smart charges 2 devices by focusing a higher current to the device that needs it most! These USB Ports use LED integration technology to illuminate in the dark to make plugging into it easier in low-light environments.
- The Duo has a digital voltage display that reads the output of the vehicle battery and alternator / stator unit for 12 and 24 volt vehicles.
- The Duo also has an integrated early warning failure detection system for batteries and stator units! The Display will begin to flash if the battery or stator output drops too low AND if the stator output is too high!
- LED lit USB ports make plug-in easier in low light environments.
- Intelligently concentrates a higher flow of current to the device that needs it most.
